Full Stack Developer

Full Stack Developer and Computer Science student at the University of Helsinki focused on building and deploying real-world systems. I develop production-grade applications using Next.js, TypeScript, PostgreSQL, and self-managed infrastructure. I care about performance, usability, and systems that actually run in the production

WORK EXPERIENCE

Dream On Networks Oy Junior Software Engineer

12/2023 – Present
Vantaa, Uusimaa, Finland

- Migrated legacy frontend codebase to Next.js, significantly improving responsiveness and performance
- Redesigned and modernized UI across production pages, improving usability and user experience
- Worked with TypeScript and Prisma in a full-stack environment
- Contributed to maintaining and improving live systems

EDUCATION

Bachelor's degree in Computer Science

University of Helsinki

01/2025 – 12/2029

I am currently studying computer science at the University of Helsinki, focusing on software development and web technologies. My studies include programming, databases, and system design. Alongside my coursework, I actively build personal projects to improve my real-world development skills and deepen my understanding of modern web development.

CERTIFICATIONS

DevOps with Docker: Docker compose

University of Helsinki

12/2025 – Present

PROJECTS

StriveAI

02/2025 – 09/2025

AI-powered fitness application running on self-managed infrastructure.

- Built full-stack system: frontend, backend, database, AI logic
- Implemented authentication, user profiles, workout tracking and subscriptions
- Integrated OpenAI API for dynamic training plans
- Deployed on own Ubuntu servers
- 300+ commits across codebase
- Currently running in private testing with real users

SKILLS

Docker, Next.js, Python, Tailwind CSS, TypeScript
